

RAÚL ESPERANTE

PALEONTOLOGIST AND PROFESSOR
RESEARCHER, GEOSCIENCE RESEARCH INSTITUTE

His research is on fossils and sediments does not prove the Genesis flood took place, but it give support to it.

CONDITIONS NECESSARY TO FORM FOSSILS

- Possession of hard parts, like shells, bones, teeth, wood.
- Rapid burial. A layer of sediment has to bury the skeleton, wood, etc., rapidly.
- Sediment has to have the right geo-chemical condition; otherwise, the organic material would decompose or it would be scavenged.

THE BIBLE IS RELIABLE

- The Bible has been shown to be true by history—historical records in the Bible are proven by archeology and records of other nations existing at the same time.
- The Bible is shown to be true by its prophecies. They are reliable and have been fulfilled—about Jesus, about nations. Historically and prophetically the Bible has shown to be reliable.

THE BIBLE IS RELIABLE

- Our own experience with the Bible shows the Bible to be true. In the Bible are many promises by God and we have experienced that God is reliable in fulfilling his promises.
- Also the life of Jesus is a witness. Nobody has been like him. The things that he said and the way he lived tells of a God that is reliable.
- God fulfills his promises in history, in prophecy and to ourselves. God is reliable. And that leads us to believe the book of Genesis is also reliable.
